

Down the toilet

In Hässleholm municipality 40 tons of rubbish are flushed down our toilets every year. A dirty flush occurs when something other than pee, poop and toilet paper is flushed down the toilet. The most common things that get flushed are snus, cotton balls, liquid chemicals, tampons, wet wipes and cotton swab. But it's easy to do the right thing - throw all rubbish in the bin, liquid chemicals into hazardous waste and just flush pee, poo and toilet paper down the toilet.

Three things you can flush down in the toilet

These do not belong there
